

Digital Identity & Authentication

01 Product Overview

DigiSign is DigiCore's national-grade digital authentication and certificate management solution. It enables secure issuance, validation, and revocation of digital certificates, allowing banks and institutions to authenticate users, transactions, and documents across all channels. DigiSign integrates with national PKI infrastructures and supports seamless adoption of e-signature, eKYC, and digital identity verification workflows.

02 Customer Pain Points

- Reliance on manual or paper-based identity checks
- Fragmented authentication across systems and channels
- Lack of national-level integration for digital trust
- Inability to verify identity or consent in real time
- Compliance gaps with digital signature frameworks

03 Solution Capabilities

- Integration with national PKI and identity registries
- Certificate issuance, lifecycle management, and revocation
- Real-time validation of digital signatures and identities
- Audit trails and timestamping for non-repudiation
- API-based integration with core banking, ECM, and workflow systems
- Fully compatible with DigiVouch and DigiVerify for enterprise-wide paperless operations

04 Unique Value Proposition

DigiSign provides a trusted digital identity foundation that empowers institutions to eliminate paper, ensure compliance, and secure digital interactions at scale.

05 Key Benefits & Outcomes

- Enables secure, paperless transactions across all enterprise channels
- Reduces fraud by validating digital identity and consent
- Accelerates onboarding and customer servicing workflows
- Ensures compliance with national and international digital signature laws
- Builds trust in digital channels and operations

06 Target Customer Segments

- National and Central Banks
- Financial Institutions and Government Portals
- eKYC and Digital Onboarding Providers
- Compliance, Risk, and Operations Teams

07 Client Success Highlights (Optional)

- Central Bank of Jordan – Nationwide rollout through DiSiFi
- Integrated with DigiVouch and DigiVerify in multiple client ecosystems

08 Integration Points (Optional)

- National PKI and eID frameworks
- Core Banking, LOS, and ECM systems
- CRM and digital customer channels
- Other DigiCore modules for full-cycle authentication

Digital Transformation Accelerators
